The Inside Story of ChatGPT

1-Why was OpenAI started?

To help the persons to resolve their problems more efficiently

2-How does ChatGPT generate images?

 Using generating tools included from others commerce that they subcontrated

3-What does the process of training ChatGPT involve?

Make some difficult requests and comprovate that he don't give wrong the result

4-What is the significance of Alan Turing's idea mentioned in the text?

He proposes to teach the machine how another person that participates in classes

5-How does ChatGPT handle complex tasks like fact-checking?

Using tools to fastcheck the results

6-What role did Sal Khan play in improving ChatGPT?

He helped to ChatGPT learn the double check results before send from the user and avoid the errors

7-How is feedback from users used in ChatGPT?

Many people are happy with the results that its help for finish their project

8-What are some unique abilities of ChatGPT demonstrated in the text?

- Make some images
- Use tool are integrate inside him
- Save the request and memorize the results

9-How does ChatGPT assist with exploratory data analysis?

He takes the necessary information to resolve problems that are relationated with the topic

10-What is the importance of inspect ability in AI tools?

Its important to check the abilities the AI to limit the potential of give results to the humans

11-What challenge did ChatGPT face with 40-digit addition?

For longs requests that's the numbers have a variety of digits, most likely the solution are wrong

12-What fears are associated with emergent capabilities in AI?

The principal fear it's that take excessive control of the humans and finish how slaves that the humans works for him

13-Why is incremental deployment of AI important?

Because it can change the live of the people

14-How has AI transformed tasks like summarizing books?

ChatGPT make some guides to understand the summarizing books giving them some keys and hint to achieve it

15-What is the role of high-quality feedback in training AI?

They attempt to give the client the better response so that they don't ask anymore about the some problem

16-What is the vision for human-AI collaboration?

The humans do requests to the machine and he give them the solution

17-How does ChatGPT handle coding-related queries?

They read the code, understand it, and he resolve the code using debug and clean code

18-What lesson does the dog's medical story teach about AI?

19-Why is public engagement with AI crucial?

Because with his help, we will are able to better understand the problems and how it should be solve

20-What is the primary mission of OpenAI?

Help to the humans for their problems

Write an 450 words essay about how humans and AI can work together to solve problems, using examples from the audio.

In the present, the AI machines are helping so much to the humans. In the past, every question of something, the humans are used to go at the libraries or learning resource center, and find the books that they needed to resolve the problem. With OpenAI, that's not necessary because you can ask something with some parameters, and he will respond to your request how you asked before.

On one hand, the habits about the people have to go on the libraries, generates waste of time around the workers or the students, and they didn't can finish the work inside in the term. Also, the information wasn't complete in the books, or there aren't the books they needed. As time went by, the books were made with more details and explaining with more accuracy and truth. In this way, the people didn't use up much time at unnecessary tasks.

On the other hand, humans achieve that the work was worth it because they spend more time and concentrate to get the correct data. Furthermore, they learnt much more information about the topic, because they must be able to analyze the information and pick the correct and denied the false data.

Nowadays, all these procedures don't be required. The reason for this is because of the existence of artificial intelligence. The AI was created in 1943 by Warren McCulloch and Walter Pitts, where they said that it was the first model of artificial neurons. But until the eighties, it was not take famous. However, in the news, the AI machines there are in all sites for example, in websites, in integrated development architecture, inclusive in the electronic of the cars how Tesla.

It's struck that many businesses contract private intelligence prepared to help in the same commerce, reduction of working hours of the members, and give them more rests and breaths to work more efficiently and obtain betters results.

The ChatGPT in the hospitals affected positively for very reasons:

- The AI can give more treatments for the unknown illness, or change the old treatments that it cause much struggle
- Discover news sickness that never were discovered
- Give more life expectancy of patients that's their final diagnosis are related with the worst final
- Help to the doctors in the operation of the patients

This digital brain is very able to resolve many problems in minutes, give more ideas for the lives development of the humans and achieve more peaceful for the future generations of which are related with the future of the humans. In conclusion to

everything explained, the AI intelligence will give for the humans the results that they need to be happy 😊.Thank you very much!
